

JBToolkit.Images.ImageHelper.
GetBase64StringFromBytesWithMime

JBToolkit.Images.ImageHelper.
HtmlImageHelper.GetBase64StringFrom
BytesWithMime

JBToolkit.Images.ImageHelper.
GetMimeFromBytes

```
graph LR; A[JBToolkit.Images.ImageHelper.GetBase64StringFromBytesWithMime] --> C[JBToolkit.Images.ImageHelper.GetMimeFromBytes]; B[JBToolkit.Images.ImageHelper.HtmlImageHelper.GetBase64StringFromBytesWithMime] --> C;
```

The diagram illustrates a refactoring or dependency relationship. Two source methods on the left are shown in white boxes with black borders. Arrows from these boxes point to a single target method on the right, which is shown in a gray box with a black border. The target method is 'JBToolkit.Images.ImageHelper.GetMimeFromBytes'.
